

红黑树插入

Red-Red 冲突: 通过使冲突往根节点移动
解决冲突(cur:当前节点)

父节点(f) is left child of grandfather node (g)	cur is right child of f	左旋 f 节点且 $cur \leftarrow f$
	cur is left child of f	右旋 g (grandfather node), $cur.color \leftarrow black$, $cur \leftarrow f$
父节点(f) is right child of grandfather node (g)	cur is right child of f	左旋 g, $cur.color \leftarrow black$, $cur \leftarrow f$
	cur is left child of f	右旋 f 节点, $cur \leftarrow f$

对冲突进行处理
